Mega-SYSTEM
Packaged Plate Settler System

Proven ... Process ... Performance

J I M M Y E R S & S O N S , I N C .

Proven...Process...Performance

The JMS Mega-SYSTEM (Packaged Plate Settler System) was developed by JMS engineers to meet the needs of smaller water treatment or industrial applications. Using the same proven concepts as our Mega-SETTLER (Plate Settler Systems), Mega-SYSTEM units are custom designed for the requirements of each application. Mega-SYSTEM packages can include flocculation, plate settler sedimentation, and sludge removal.

Using technology that JMS pioneered, such as upgrading to stainless steel on key components, special preparation of spool and pipe shafts, and heavy duty bearings, the JMS Mega-SYSTEM will provide the same performance and low maintenance requirements that JMS is known for. JMS also has a pilot packaged unit that can be used for demonstration or testing purposes.

Advantages: Mega-SYSTEM

Process Advantages

- Can be equipped with flocculation area, plate settlers, sludge removal, and system controls
- Special designs to meet the need of the application
- Perfect option for small plants, or can be used in pilot situations
- Single unit, ready for operation, available for flows of 50-700+ GPM

Maintenance Advantages

- Use of stainless steel for corrosion resistance
- Package unit lowers installation cost and effort

Experience Advantages

- JMS is a leading supplier of water and wastewater treatment equipment with thousands of successful applications
- Utilizes proven design enhancements critical to system longevity
- System designs are based on numerous installations and field testing

System Integration

In addition to Mega-SYSTEM, JMS expertise extends to a host of other products and systems listed at right. Having such a broad and varied range of experience means your water and wastewater needs, whether individual component or full system, are understood. Optimized efficiency and process performance are yours for the asking. **Contact JMS today.**
